How to change windshield wipers on a car – replacement tutorial

VIDEO TUTORIAL

PREPARE THESE ITEMS IN ADVANCE:

- new windscreen wiper blades
- soft cloths

BUY TOOLS

AUTODOC recommends:

- Follow the car manufacturer's instructions and examine the wiper blade design carefully

1 Have a look at the wiper blade connector design. There are many different fitting mechanisms. But they're all quite simple

2 Lift the wiper arm away from the windscreen

Please note!

- If necessary, set the wiper blades into the service mode

3 Depending on the vehicle's design, you may need to do the following: turn the ignition on and off and activate the windscreen wiper system

4 Or use the service menu of the on-board computer

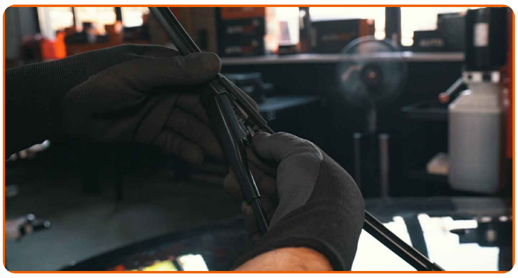

5 Or just raise the arms manually

Important!

- Make sure that the arm does not rest against the bonnet
- Hold the wiper arm securely to avoid damaging the windscreen

6 Unclip the wiper blade connector

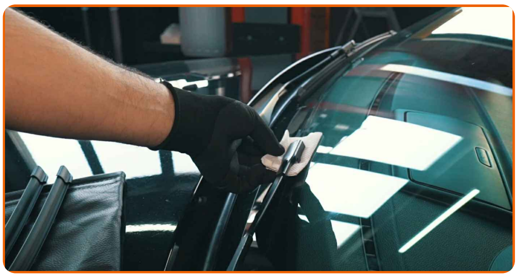

7 Remove the blade from the connector

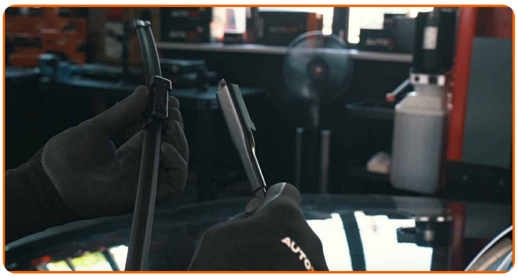

8

Put a soft cloth under the arm and carefully lower it down

9

Alternatively, you can use one hand to hold the arm and the other hand to mount the new blade

10

Click the connectors in place

11

Gently lower the arm back onto the windscreen

Please note!

- Don't touch the rubber part of the blade to avoid damaging it

12 After replacement, check that the windscreen wiper system is working properly

13 The blades on the driver's and passenger's sides may differ in size

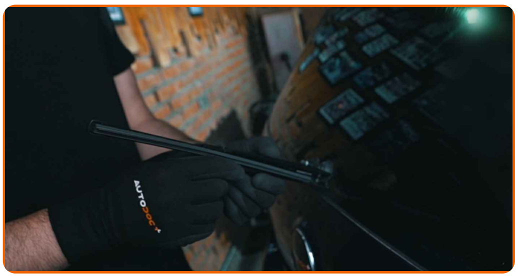

14 Replace the arms if they've corroded or fail to press the blades against the windscreen sufficiently

15 Remove the protection cap from the arm fastener

16 Lift the wiper arm away from the glass

AUTODOC recommends:

- Have a look at the design of the wiper blade connector

17 Slide the upper connector off

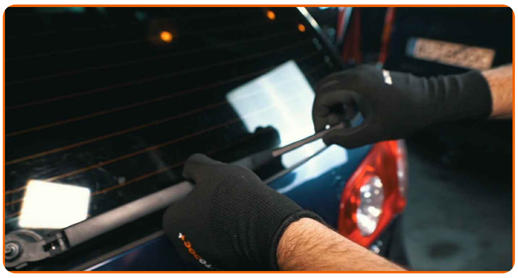

18 Remove the wiper blade

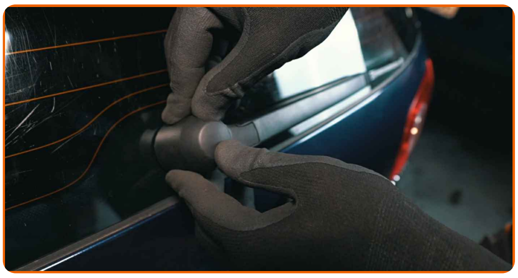

19 Install the new wiper blade and fasten it

20 Gently lower the arm back onto the windscreen

21 Install the protection cap

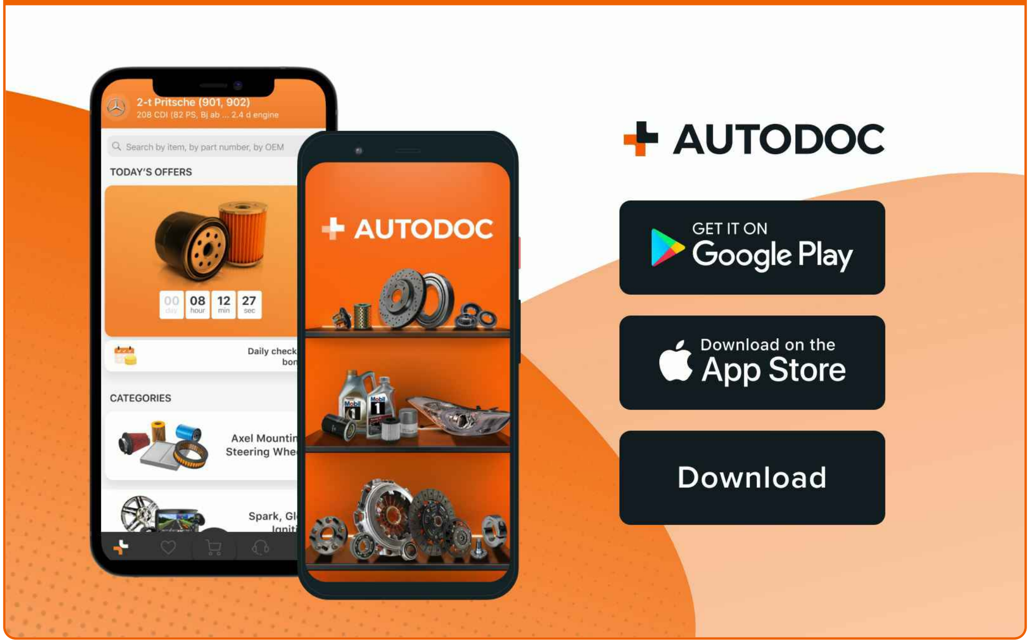

22 After replacement, check that the windscreen wiper system is working properly
